Pathview is an open source software package distributed under GNU General
Public License version 3 (GPLv3). Details of GPLv3 is available at
http://www.gnu.org/licenses/gpl-3.0.html. Particullary, users are required to
formally cite the original Pathview paper (not just mention it) in publications
or products. For details, do citation("pathview") within R.

The pathview downloads and uses KEGG data. Non-academic uses may require a KEGG
license agreement (details at http://www.kegg.jp/kegg/legal.html).

Q. Can you do the same procedure as above to plot the pathview figures for the top 5 down-reguled pathways?

```
# Select the top 5 downregulated pathways

Q: What pathway has the most significant "Entities p-value"? Do the most significant pathways listed match your previous KEGG results? What factors could cause differences between the two methods?

Pathway Drug Resistance of FLT3 Mutants is the most significant p value of 7.43E-1. KEGG and Reactome share pathways like Apoptosis and DNA Replication.
